Streams sind Graphen

Monitoring?

Monitor: Hallo, wie geht es dir?

System: Hallo, alles okay.

Monitor: Gut :-)

Monitoring?

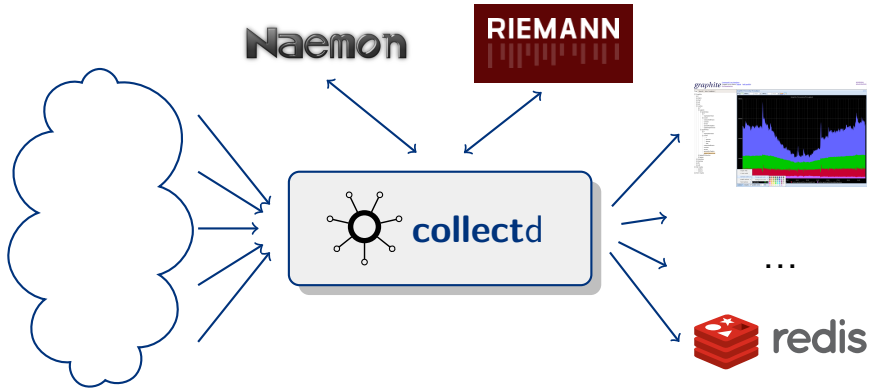

Monitor: Hallo, wie geht es dir?

System: Hallo, alles okay.

Monitor: Gut :-)

Und wenn nicht?

Events

Beispiel: ELK

Automatisierung

"I SPEND A LOT OF TIME ON THIS TASK.
I SHOULD WRITE A PROGRAM AUTOMATING IT!"

- Konfigurationsmanagement
- Deployment
- Life-Cycle Management
- Inventarisierung

Beispiel: Puppet + Foreman

The screenshot shows the Foreman Overview page. At the top, there is a navigation bar with links for Foreman, Dashboard, Hosts, Reports, Facts, Audit, Settings, and Tools. The main content area is titled 'Overview' and includes a search bar and a timestamp 'Generated at 09 Jan 12:58'. Below this is a table with system health metrics:

Description	Count
Hosts that had performed modifications without error	4
Hosts in Error State	0
Good Host Reports in the last 30 minutes	11 / 20 hosts (55%)
Hosts that had pending changes	0
Out Of Sync Hosts	4
Hosts With File Reports	1
Hosts With Alerts Disabled	0

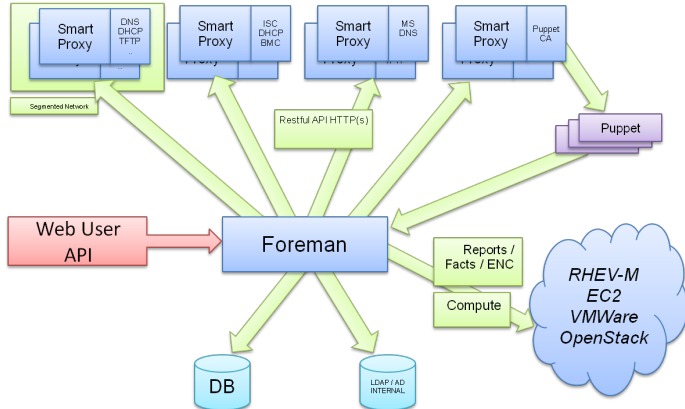

Below the table is a section titled 'Puppet Clients Activity Overview' containing two charts:

- Puppet Clients Activity Overview:** A pie chart showing the distribution of client states: Pending changes (0), Sync (1), Error (0), Devcycle (4), Hosts not enabled (0), Report (1), and Active (4).
- Pun Distribution in the last 30 minutes:** A bar chart showing the number of clients with various punishment levels (e.g., 0, 1, 2, 3, 4) over time.

At the bottom of the page, there is a footer with the text 'Version 1.2014 © 2009-2013 Paul Holly and Chad Leroy' and a link to 'Help / Wiki / Support'.
